IDENTIFIERS Arrests; Child Mortality; Day Care Availability; *Indicators; *Utah; Vaccination

ABSTRACT

This Kids Count report examines statewide trends in the well-being of Utah's children. The statistical portrait is based on 28 indicators of children's well-being in five areas: (1) child health (prenatal care, low birth-weight births, infant mortality, child injury deaths, injury-related hospital discharges, child abuse, childhood immunizations, untreated tooth decay, and suicide death rates); (2) economic security (unemployment rate, poverty rate, quality child care availability, health insurance, special health care needs, and additional poverty indicators); (3) community safety (juvenile adjudication rates and domestic violence); (4) education (fall enrollment and dropout rate, pupil-teacher ratio, truancy referrals to juvenile court, and school meals program participation); and (5) safe behaviors (teen births, teen chlamydia infection rate, teen smoking, overweight youth, physical exercise, seat belt usage, and unlawful drug use). Following introductory remarks, the first section of the report provides demographic information at the county and state level and information on child well-being at a glance. The bulk of the report presents state and county level information on the above indicators. The report's third section details findings on selected health and safety issues for 61 small areas within the state. The final section details Utah's Kids Count project. Among the findings, positive trends are noted for infant mortality, availability of quality child care, teen birth rate, cigarette smoking, exercise, and use of seat belts. Negative trends are noted for prenatal care, low birth-weight

This is the seventh edition of *Measures of Child Well-Being in Utah*. The annual publication of the Utah KIDS COUNT Project is a compilation of statistics that measure child well-being in the state. The guide is used for a variety of purposes including: identifying positive and negative trends in the state to allow policy-makers and service providers to ascertain where programs are effective and where changes need to be made; consolidating and analyzing data relevant to children that can be used as a resource for those applying for grants; providing the media with ready access to the most recent data on children; a resource for all interested individuals who want to make child advocacy a part of their lives.

Through a thoughtful look at the data and analysis of trends available in this publication, action plans can be formulated to further the goal of healthier, happier children.

How to Use the Data Book

Many of the indicators in this book are presented as percents or rates which are needed to compare one group with another or to follow trends over time. **Rates** are calculated by taking the number of incidents in any given category (for example child deaths), dividing it by the total number of individuals in that category (all children), and multiplying by 1,000 or 10,000 to give you the number of incidents per 1,000 or 10,000.

$$\frac{\text{Number of Child Deaths}}{\text{Total number of Children}} \times 1,000 = \frac{10 \text{ deaths per}}{1,000 \text{ children}}$$

A **percentage** is basically the same formula, multiplied by 100 rather than a larger number.

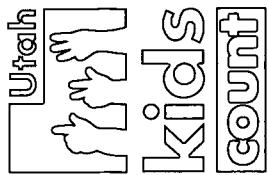

As the population base becomes smaller, as it does in many counties in Utah, statistical variation becomes more prone to anomalies. For example, a county has 2 children die out of a population of 75 children. If we divide 2 by 75 and multiply by 1,000 we get a child death rate of 26 per 1,000. If the next year only 1 child dies out of 75 the child death rate would be 13. This seemingly large decrease is a result of statistical variation, and the magnitude of the drop is exaggerated because the denominator (75) is so small. To attempt to minimize chance variations such as these, 5 year averages for some of the indicators. This allows the use of larger denominators in those counties where the population is small, enhancing the reliability of the rates. Wherever possible we have also included raw numbers or "counts". While rates are useful for making comparisons and following trends, actual numbers are necessary to determine service needs such as anticipated caseloads.

Statistics alone cannot help improve the well-being of Utah's children, but they can help all Utahns make informed decisions. The information in this book is an important tool for identifying problem areas to confront and successes to celebrate. Utah Children invites all citizens of Utah to get involved in the lives of children to make sure our next generation is equipped to be successful leaders and adults.

Demographics

**“Our future generations - when
they look back on this - what will
they say that we have done for
them, and will it be honorable?”**

Jackie Warledo

Note: As a result of the revised standards for collecting data on race and ethnicity issued by the U.S. Office of Management and Budget in 1997, Census 2000 was the first national census in which respondents were allowed to select more than one race. Respondents that selected more than one race in 2000 are included in the "Two or More Races" category. Race data from Census 2000 are not directly comparable with data from the 1990 Census and previous censuses.

Definition: Number and percent of infants born to pregnant women receiving prenatal care in the first trimester as a percentage of the total number of live births. These data are based on self-reports of the mother after she delivers the infant, during the process of compiling the birth certificate information.

- **Source:** Utah Department of Health, Office of Vital Records and Statistics.

○ **Trend:** The percentage of Utah mothers receiving prenatal care in the first trimester has been on a decline since 1994. However, since 1999 we have begun to see marginal improvement.

Number and Rate of Utah Infant Mortality

- **Definition:** An infant death is defined as death of a live-born infant within one year of birth. Rates are per 1,000 live births.

○ **Source:** Utah birth certificate data, Utah Department of Health, Office of Vital Records and Statistics.

○ **Trend:** The infant mortality rate continued its downward trend after a slight increase in 2000. This trend mirrors the national trend of decreasing infant mortality.

- **Source:** Utah Department of Health, Office of Vital Records and Statistics.

○ **Trend:** The injury death rate has fluctuated over the last 10 years from a high of 31.7 in 1994 to a low of 19.1 for 1999. In Utah, the majority of injury deaths (or sometimes called violent deaths) are due to motor vehicle accidents with suicide a close second for teenage males. The rate rose slightly in 2000 to 20.5 per 100,000 youth and showed little change in 2001.

**"Why do you turn and scrape
away every stone to gather
wealth and take so little care of
your children to whom one day
you must relinquish it all?"**

Socrates

Abuse Definition: Figures given here represent the number of substantiated victims of abuse or neglect and can include sexual abuse, physical abuse, emotional maltreatment, abandonment, fetal addiction to alcohol or other substances, physical neglect, and educational neglect. Rates are per 1,000 children under age 18.

Source: Utah Department of Human Services, Division of Child and Family Services.

Trend: In FY 2002 there were 9,906 victims of abuse or neglect in Utah compared to 9,543 in FY 2001 and substantially up from the 8,754 in FY 2000.

Childhood Immunizations

Suicide Death Rates

- **Definition:** Percentage of two-year-olds adequately immunized (4:3:1) as a percentage of the total number of 2-year-olds in the state. 4:3:1 is the ratio of immunizations considered adequate for a child aged 2 years or under. The following is the prescribed combined vaccination series: Four doses of diphtheria, tetanus toxoids and pertussis vaccine (DTP), three doses of poliovirus vaccine (OPV), and one dose of measles-mumps-rubella vaccine (MMR).

○ **Source:** National Immunization Survey, National Immunization Program, National Center for Health Statistics, Centers for Control and Prevention.

Percent of Children Age Appropriately Immunized, Utah

| | |
|------|-----|
| 1994 | 70% |
| 1995 | 68% |
| 1996 | 64% |
| 1997 | 71% |
| 1998 | 77% |
| 1999 | 82% |
| 2000 | 77% |

- **Trend:** National Immunization Survey (NIS) estimated coverage in Utah during 2000 for 4:3:1 was 77.4%. The national average for 2000 was 77.6%. These numbers are for children between 19 and 35 months. Immunization levels fell from 1999 to 2000.

- **Definition:** Suicide deaths among children (10-19 years), per 100,000 children in the same age group.

- **Source:** The age and cause of a person's death are recorded on death certificates. Data are collected and kept by the Utah State Department of Health, Bureau of Vital Statistics.

- **Trend:** Suicide rates have remained fairly stable for the last several years. Suicide deaths are substantially higher for male youth than for female youth. In addition, as shown on page 16, there were an additional 318 hospital discharges for suicide attempts.

Source: The 2000 figures are from the 2000 Decennial Census and are reported from 1999 income. Poverty is defined as \$16,954 in 1999. 50% of poverty for a family of four would equal \$8,477 and 150% would equal \$25,431.

Quality Child Care Availability

FY 2002 Quality Child Care Availability- Infants/Toddlers (under 24 months)

Definition: The number of regulated child care slots (not providers) in the following age groups: under 24 months, 2-5 years, 6-12 years. Quality child care is defined as regulated child care. The underlying assumption is that regulated child care is of better quality than unregulated providers. Slot and vacancy data are snapshots in time and are estimates. Data are collected by fiscal year quarter. Calendar year data are based on four quarters of data and are averages.

Child care slots are derived by the number of children a child care provider is licensed to care for (total capacity). A regulated child care provider may choose to limit the number of children in their care. Child care vacancies may include underutilized capacity.

○ **Source:** Data is gathered by regional child care resource and referral agencies and compiled by the Department of Workforce Services, Office of Child Care. The data represents a point in time and can change rapidly.

○ **Trend:** In last year's edition of *Measures* it was reported that Utah had 35,169 licensed child care slots. This year a total of 39,008 licensed slots were reported. While this increase is encouraging it is still substantially below the number of children with working parents (244,945 estimated in 1999).

Children With Special Health Care Needs

- **Definition:** Percent of all children, 0-17 years, reported to have no health insurance as a percentage of all children
- **Source:** The Urban Institute, 2002. Released August 1, 2002. Based on merged March 2000 and 2001 Current Population Survey data, weighted to represent one year, with adjustments for reported changes in Medicaid and CHIP as of December 2001.
 - In Utah, 9.6% of kids under 18 (73,100) do not have health insurance. Of those, 39,500 are likely eligible for CHIP or Medicaid.
 - According to surveys from the Utah Department of Health, the most common reason for lack of coverage was "could not afford insurance" (52% of respondents) followed by "Employer does not offer insurance" (33%). (Office of Public Assessment, 2002, Overview of the 2001 Health Status Survey.) In addition, surveys conducted by The Robert Wood Johnson Foundation found that 5 out of 10 parents of eligible kids don't know that their children may qualify for low-cost or free health insurance.
- **Definition:** CSHCN is defined in accordance with the Foundation for Accountability (FAACT) Living with Illness questionnaire definition. Thus, one is considered to be CSHCN if he or she had any of the following conditions that had lasted or were expected to last for at least 12 months:
 1. Uses prescription medications
 2. Needs more services (medical, educational, mental health) than most children
 3. Has restricted activity
 4. Needs physical, occupational or speech therapy
 5. Receives mental health treatment
 6. Uses durable medical equipment/special equipment
 7. Has life-threatening allergies
 8. Is on a special diet
 9. Has an individualized educational plan, early intervention, special education classes
 10. Has learning or behavioral difficulties
- **Source:** 2000 Utah Child Health Survey, Children with Special Health Care Needs, Utah Department of Health.
- **Trend:** Results of the survey indicate that 13% of Utah children had special health care needs. The most common conditions were behavioral conditions such as attention deficit hyperactivity and asthma or respiratory conditions.

"Each of us must come to care about everyone else's children. We must recognize that the welfare of our children and grandchildren is intimately linked to the welfare of all other people's children. After all, when one of our children needs some lifesaving surgery, someone else's child will perform it. If one of our children is threatened or harmed by violence, someone else's child will be responsible for the violent act. The good life for our own children can be secured only if a good life is also secured for all other people's children."

Lillian Katz

International Poverty Indicators

The information to the right has been gathered in order for advocates to examine geographically the issue of poverty in Utah. In other words, where are the pockets of poverty as defined by several economic indicators.

As you can see from the maps on the following pages, rural Utah is particularly affected by issues associated with poverty. Children who grow up in poverty are more likely than other children to have poor health, experience delays in learning and development, become teen parents, and earn less as an adult.¹ While these statistics are not child indicators per se, they do reflect family situations and are therefore relevant to child well-being.

(Sitting Bull, Sioux)

Juvenile Adjudication Rates

Definition: The following rates represent the number of referrals (for juveniles) for the various offenses examined. Juvenile numbers are for youth through age 17. The referrals/filings do not include those cases where the victims did not press charges or where the police decided there was insufficient evidence to warrant adjudication. These are only the cases which actually made it to court. Two types of offenses are examined.

- o Violent crime offenses in juvenile court - violent crimes are all felonies, plus class A, B, and C misdemeanors against persons and also class A misdemeanors against property. This includes murder, rape, and assault. They also include property crimes which are committed with a weapon.

- o Substance abuse offenses in juvenile court - Substance abuse offenses are those that deal with alcohol, tobacco or a controlled substance (drugs).

○ **Source:** Utah State Courts; Juvenile Court Information System (JIS).

○ **Trend:** While a decrease in both substance abuse offenses and violent crime offenses can be seen over the last few years both rose slightly in 2001.

Domestic Violence

○ **Definition:** Any criminal offense involving violence or physical harm or threat of physical harm, or any attempt, conspiracy, or solicitation to commit a criminal offense involving violence or physical harm, when committed by one cohabitant against another. Domestic violence statistics are defined as a felony or misdemeanor case where the prosecutor has indicated that the case involved domestic violence.

○ **Source:** Utah State Courts, adult court database (CORIS)

○ **Trend:** The number of domestic violence cases has increased every year.

Utah Juvenile Violent Crime Offenses

| Year | Number of Offenses |
|------|--------------------|
| 1995 | 16,898 |
| 1996 | 15,750 |

Education

**"If a child is to keep alive his
inborn sense of wonder, he needs
the companionship of at least one
adult who can share it,
rediscovering with him the joy,
excitement and mystery of the
world we live in."**

Rachel Carson

Fall Enrollment and Dropout Rates

Full Text Provided by ERIC

Definition: Enrollment is the number of all students enrolled in the fall of each school year. A dropout is an individual in grades 7-12 who was enrolled in public school at some time during the previous school year, and 1) was not enrolled by October 1 of the current school year; 2) has not graduated from high school or completed a state or district approved education program; 3) does not meet any of the following conditions a) transfer to another school; b) temporary absence due to suspension or school approved illness; c) death. Dropout rates are the number of dropouts in grades 7-12 divided by the total enrolled in those grades as of October 1.

○ **Source:** Utah State Office of Education, Finance and Statistics.

| Statewide | 20.23 | 21.74 | 23.93 | 5.10 |

- **Definition:** Pupil/Teacher ratios are calculated by taking the total number of students divided by the total number of teachers. Interns and resource teachers are included. Pupil/Teacher ratios represent average daily membership (ADM) in classrooms. ADM does not include students attending out of state.
- **Source:** Utah State Office of Education, Finance and Statistics.
- **Trend:** Due to a change in methodology, data for 1995-96 and later are not comparable to earlier data. Relatively little change occurred between 1998 -1999 and 2000-2001. Some districts still have grade 7 - 12 pupil/teacher ratios above 25 including Cache, Jordan, Nebo, and Weber.

| Year | Pupil Teacher Ratios in Average Daily Membership | Kindergarten | Grade 1-6 | Grade 7-12 |

Truancy Referrals to Juvenile Court

School Meals Applications 2000 - 2001

Definition: Statistics for truancy are for habitual truancy for children under 18. Habitual truancy indicates a school age minor has received two or more truancy citations within one school year. The definition of a truancy citation varies from school to school but normally it means excessive absences without an excuse.

○ **Source:** Utah State Court; Juvenile Court Information System.

○ **Trend:** Truancy referrals varied little from 1995 to 1998. Since then, referrals for truancy have steadily increased.

Safe Behaviors

“We are bound together in our desire to see the world become a place in which our children can grow free and strong. We are bound together by the task that stands before us and the road that lies ahead.”

James Taylor, “Shed a Little Light”

Definition: Live births to married and unmarried females aged 15-17 years per 1,000 females (aged 15-17 years).

Utah Teen Births, Females Age 15-17

Rate per 1,000 Females Age 15-17

○ Source: Utah Department of Health, Utah Birth Certificate

○ **Significance:** Teen births affect newborn infants, their young mothers, their fathers, their families, and society. Pregnant teens have higher risks for inadequate prenatal care, incomplete education, single parenthood, and increased poverty for mother and child.

○ **Trend:** Teen birth rate in Utah has remained fairly stable over the last 10 years. In 1998, Utah's rate was 23.5 per 1,000 females aged 15-17 years. The teen birth rate fell in 2001 to 18.5.

Measures of Child Well-Being in Utah, 2003

Chlamydia Trachomatis Infection Among Teens

Chlamydia Cases in Utah in 15 - 19 Year Olds Rate per 100,000 children age 15 - 19

Definition: Number and rate of teens diagnosed with Chlamydia per 100,000 teens, ages 15-19 years old. Chlamydia is a sexually transmitted infection caused by the bacteria *Chlamydia trachomatis*.

- **Source:** Utah Department of Health, Bureau of Epidemiology.
- **Trend:** The rate of chlamydia infections among teens has been going up for the last several years. However, a slight improvement was seen for 2000. The rates of chlamydia infection for Salt Lake County and Weber County are elevated above the rate for the rest of the state. Utah has had rates of STD's (sexually transmitted disease) that are consistently lower than those of the nation.

Chlamydia Cases in Utah in 15 - 19 Year Olds 1997 - 2001 Rate per 100,000 children age 15 - 19

| Year | Cases | Rate per 100,000 |
|------|-------|------------------|
| 1997 | 691 | 342.0 |
| 1998 | 898 | 442.1 |
| 1999 | 821 | 405.9 |
| 2000 | 752 | 345.6 |
| 2001 | 892 | 424.1 |

Overweight Youth

Definition: Percent of students (grades 9-12, approximate age 12-18 years) reporting having smoked tobacco during the past 30 days, as a percentage of all surveyed students in the same age group.

Source: Utah Youth Risk Behavior Survey, Utah State Office of Education.

Significance: Tobacco use and addiction usually begin in adolescence. Additionally, tobacco in adolescence increases the likelihood that an adolescent will use other drugs. Thus, preventing tobacco use among youth has become a major priority in tobacco control efforts.

Trend: In Utah, YRBS data suggests a decline in cigarette smoking rates among 9th -12th graders, since 1997.

Definition: Percent of high school students (in grades 9-12) who **described themselves** as slightly or very overweight as a percentage of all surveyed students in same age group.

Source: Utah Youth Risk Behavior Survey, Utah State Office of Education.

Significance: There is increased concern about the increasing prevalence of obesity in children and adolescents. Overweight and obesity acquired during childhood or adolescence may persist into adulthood and increase the risk of certain chronic diseases later in life

Trend: There has been a slight upward trend in the percent of teens who perceive themselves to be overweight. Females were significantly more likely than males to consider themselves overweight (39.6% compared to 18.4%).

Percent of students (grades 9-12) who described themselves as slightly or very overweight as a percentage of all surveyed students in same age group

| Year | Percentage |
|------|------------|
| 1990 | 25.8 |
| 1991 | 30.0 |
| 1993 | 31.5 |
| 1995 | 25.5 |
| 1997 | 24.2 |
| 1999 | 26.5 |
| 2001 | 28.7 |

Percent of students (grades 9-12) reporting having smoked tobacco during the past 30 days, as a percentage of all surveyed students in the same age group.

| Year | Percentage |
|------|------------|
| 1990 | 19.7 |
| 1991 | 16.8 |
| 1993 | 17.4 |
| 1995 | 17.0 |
| 1997 | 16.4 |
| 1999 | 11.9 |
| 2001 | 8.3 |

Physical Exercise

○ **Definition:** Percent of high school students (grades 9-12) reporting having engaged in vigorous physical activity for more than 20 minutes, at least 3 or more times per week as a percentage of all surveyed students in same age group.

○ **Source:** Utah Youth Risk Behavior Survey, Utah State Office of Education.

○ **Significance:** Physical activity provides important health and emotional benefits for adolescents. It lowers blood pressure, aids in weight management, and improves cardiorespiratory function. A physically active lifestyle may continue into adulthood and prevent a variety of chronic health problems.

○ **Trend:** The percentage of Utah students engaging in moderate to vigorous physical activity had been rising steadily since 1995. However, in 2001 only 67% of Utah students said that they engaged in vigorous physical activity compared to 77% in 1999.

Seat Belt Usage

○ **Definition:** Percent of high school children (9-12 grade) who reported wearing a seat belt "always" when riding in a car driven by someone else as a percentage of the total number of surveyed students.

○ **Source:** Utah Youth Risk Behavior Survey, Utah State Office of Education.

○ **Significance:** According to the National Highway Traffic Safety Administration (NHTSA), deaths and serious injuries caused by motor vehicle crashes could be reduced by approximately 50% with proper and consistent use of safety belts.

○ **Trend:** Use of seat belts by teens is increasing.

Percent of students (grades 9-12) reporting having engaged in vigorous physical activity for more than 20 min, at least 3 or more times per week as a percentage of all surveyed students in the same age group

| Year | Percentage |
|------|------------|
| 1990 | 67.2 |
| 1991 | 71.7 |
| 1993 | 67.6 |
| 1995 | 67.9 |
| 1997 | 71.2 |
| 1999 | 77.0 |
| 2001 | 67.1 |

Percent of students (9-12 grade) who reported wearing a seat belt "always" when riding in a car driven by someone else as a percentage of the total number of surveyed students in the same age group.

| Year | Percentage |
|------|------------|
| 1990 | 19.0 |
| 1991 | 23.8 |
| 1993 | 28.8 |
| 1995 | 29.7 |
| 1997 | 31.5 |
| 1999 | 39.3 |
| 2001 | 50.0 |

Ilawful Drug Use

Definition: Percent of students (grades 9-12) reporting having used marijuana, cocaine (inc. powder, crack or freebase), glue (inc. breathing contents of aerosol spray cans, inhaling paints/ sprays to get high) during the past 30 days as percentage of all surveyed students in the same age group.

○ **Source:** Utah Youth Risk Behavior Survey (YRBS), Utah State Office of Education.

○ **Significance:** Illicit drug use by adolescents can have immediate as well as long term health and social consequences. Marijuana is the most commonly used illicit drug among high school students. Marijuana use has both health and cognitive risks, particularly damage to pulmonary functions as a result of chronic use. Cocaine use is linked with health problems that range from eating disorders to disability to death from heart attacks and strokes.

Percent of students (grades 9-12) reporting having used cocaine (includes powder, crack, or freebase) during the past 30 days as percentage of all surveyed students in the same age group.

| Group | Percentage |
|---------------|------------|
| Males | 3.4 |
| Females | 1.9 |
| 15 or younger | 3.6 |
| 16 or 17 | 2.7 |
| 18 and older | 0.8 |
| Total | 2.7 |

Percent of students (grades 9-12) reporting having used marijuana during the past 30 days as percentage of all surveyed students in the same age group, 2001

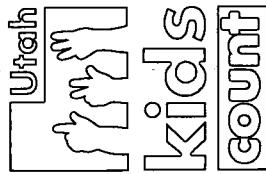

| Group | Percentage |
|---------------|------------|
| Males | 12.2 |
| Females | 7.1 |
| 15 or younger | 8.8 |
| 16 or 17 | 10.4 |
| 18 and older | 8.7 |
| Total | 9.7 |

Percent of students (grades 9-12) reporting having sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paints or sprays during the past 30 days as percentage of all surveyed students in the same age group.

| Group | Percentage |
|---------------|------------|
| Males | 5.9 |
| Females | 4.2 |
| 15 or younger | 5.5 |
| 16 or 17 | 5.4 |
| 18 and older | 2.9 |
| Total | 5.1 |

Small Area Analysis

“A child is a person who is going to carry on what you have started. He is going to sit where you are sitting, and when you are gone, attend to those things which you think are important... the fate of humanity is in his hands”

Small Area Analysis of Child Well-Being

- local health - areas were constrained so that they did not cross local health district boundaries.

Assessing health status at the community level is important for many reasons. For that reason the Utah Department of Health, Bureau of Surveillance and Analysis created sixty-one small areas using ZIP code and county boundaries based on the following criteria:

- population size - at least 20,000 population
- county boundaries - whenever possible, sub-county areas did not cross county boundaries (The exception was that eastern Weber County was combined with Morgan County).
- income levels - whenever possible, small areas contained ZIP code areas with similar socioeconomic status (per capita income)

Areas vary widely in size. The smallest areas consist of a few square miles, in an urban county, and the largest area encompasses four large frontier counties. The key maps on this page are included to help convey the location of the small areas geographically.

Multiple years are combined for analysis to allow for computation of reasonably stable rates. In other words, to have a greater degree of reliability, multiple years were used to provide estimates that are more reflective of those that are typical for a given area.

As the old man walked the beach at dawn, he noticed a young man ahead of him carefully picking up starfish from the sand and placing them back into the sea. Finally, catching up to the youth, the old man asked him why he was doing this.

"Because the stranded starfish will die if they are left in the morning sun," he replied.

"But the beach goes on for miles and there are millions of starfish everywhere!" scoffed the old man. "How can your efforts possibly make any difference?"

For a moment the young man contemplated the starfish in his hand before he tossed it gently into the waves.

"It makes a difference to this one," he said.

out Utah Children

- In Children was founded in 1985 by individuals concerned about children whose parents are least able to protect and nurture them. The goal is to encourage preventive investment in children before they get sick, get into trouble, drop out of school or suffer family breakdown. Utah Children does not provide direct service, but seeks to complement direct services for children by providing a bridge between community programs and state policy-making. Utah Children seeks to:
- Improve and increase the effectiveness of the public systems charged with the protection of abused, neglected, and foster children,
 - Assure the provision of children's basic needs: adequate nutrition, health care, child care, and monetary support from absent parents,
 - Assure that safe, quality child care is available to all children,
 - Protect our communities and redirect delinquent youth by improving the effectiveness of the juvenile justice system.

About KIDS COUNT

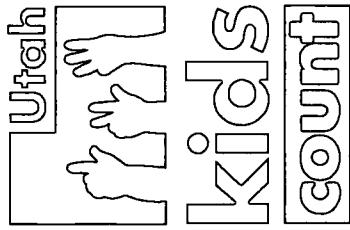

Utah KIDS COUNT is one of several projects of Utah Children. It is partially funded by the Annie E. Casey Foundation of Baltimore, Maryland which funds similar projects in every state for the purpose of measuring and reporting on the status of children over time. The data is used to inform public debate and strengthen public action on behalf of children and families within our nation.

Through KIDS COUNT projects the Annie E. Casey Foundation encourages state, county, and city efforts to track the status of children for the purpose of ensuring better futures for all communities in the United States.

By providing Utah policymakers and citizens with data-based information about child well-being, UTAH KIDS COUNT seeks to enhance local, state, and national discussions concerning healthy, educated, safe, and economically-secure futures for all our children.

Acknowledgments

- All the state agencies who provided data and editorial advice.
- The staff of Utah Children for their help and support.
- Tom Haven for assistance with editing and proofing.
